Diamond Band Saw Blades

Top & Tail Cut \nearrow Squaring \nearrow Cropping

For Cropping and Squaring MONO and MULTI crystalline silicon ingots for the PV industry. Electroplated and Metal Bond Diamond Band Saw Blades are available.

Electroplated Diamond Band Saw Blades

Several blade edge designs are available and selection depends on material to be cut and cutting conditions. Electroplated blades allow for accurate cutting and improved saw efficiency with reduced kerf loss.

Size Table

| Length (mm) | Core Width (mm) | Core Thickness (mm) |
|--------------|-----------------|---------------------|
| 2,500~10,000 | 26~125 | 0.15~1.33 |

 $^{* \}textit{Please consult with our salesmen for details to determine band configuration}. \\$

Blade Edge Shapes

Segmented Type (Half Moon Type)

- ◆ For cutting hard and brittle materials
- ◆ Superior tool life and cutting ability in MONO silicon processing
- ◆ Allows greater flexibility in customizing blade edge width and pitch

Serrated Type

- ◆ Wide width band saw blades possible
- ◆ For cutting difficult-to-cut materials
- ◆ Reduced-loading saw tooth design encourages chip evacuation

Continuous Type

- ◆ A variety of band core width available
- ◆ Continuous rim design reduces the saw marks on the materials
- ◆ Suitable in cutting hard materials

Metal Bond Diamond Band Saw Blades

Long-lasting metal bond saw blades can cut large workpieces with high accuracy using high strength steel core and optimum segment design.

| Length (mm) | Core Width (mm) | Core Thickness (mm) |
|-------------|-----------------|---------------------|
| 3,700~9,800 | 50~155 | 0.5~1.25 |

^{*}Please consult with our salesmen for details to determine band configuration.

Blade Edge Shapes

Serrated Type

- ◆ Slotted design minimizes brazing heat effect
- ◆ Flexibility in customizing bond matrix and diamond particle size
- ◆ Allows greater flexibility in customizing blade edge pitch and dimension

Cutting Conditions

| Type of Blades | Workpieces | Cutting Speed (mm/min) | Peripheral Speed (m/min) | Tension (N/mm²) |
|-------------------------|------------|------------------------|--------------------------|-----------------|
| Electroplated Band Saw | MONO Si | 10~50 | 1,000~1,200 | 100~200 |
| Electropiated Ballu Saw | MULTI Si | 5~40 | 1,000 - 1,200 | 100 -200 |
| Metal Bond Band Saw | MONO Si | 3~30 | 800~1,200 | 100~200 |
| Metal Bollu Ballu Saw | MULTI Si | 3.~30 | 000 - 1,200 | 100 -200 |

 $^{* \}textit{Maintain optimum blade condition with periodic dressing using recommended dressing sticks}$

Selection Guidelines

| Electroplated Band Saw | Metal Bond Band Saw | Selection Guidelines |
|---------------------------|---------------------|--|
| MONO Crystalline Silicon | | Reduced kerf loss, improved saw efficiency |
| MULTI Crystalline Silicon | | Long lasting |

 $\mathsf{4}$

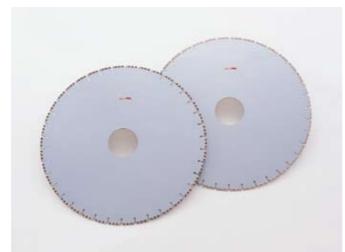

OD Blades for MONO & MULTI crystalline Silicon Ingots and Bricks

Squaring / **Cropping**

Used for end-cutting, removing brick inclusions and squaring MONO and MULTI silicon.

Applications

- ◆ Squaring MONO silicon ingot
- ◆ Squaring and end-cutting MONO seed silicon
- ◆ End-cutting MULTI silicon bricks to remove inclusions

Blade Shapes

Standard typeBalances blade life and sawing ability

Slotted type Good cutting ability

Wave type
Special specification for reducing chipping

Cutting Condition

| Surface Speed | Feed Speed | Process | |
|----------------|-------------|------------|--|
| 1500~2000m/min | 20~40mm/min | Plunge Cut | |

To improve blade performance:

- ◆ Supply sufficient quantity of coolant/water during cutting
- Insure ingot/brick is firmly attached to base to reduce triangle-shaped exit-chipping
- Maintain optimum blade condition with periodic dressing using recommended dressing sticks

Size Table

| Size (Inch) | Thickness | Applications |
|-------------|-----------|---|
| φ400 (16) | 2.5U | |
| φ450 (18) | 3.0U | |
| φ500 (20) | 3.5U | MONO-Si — Squaring MULTI-Si — Cropping |
| φ550(22) | 3.5U | |
| φ600 (24) | 3.5U | |
| φ800 (32) | 4.0U | |
| φ900 (36) | 4.5U | MULTI-Si — Sizing — End Cutting |
| φ1000 (40) | 5.0U | |

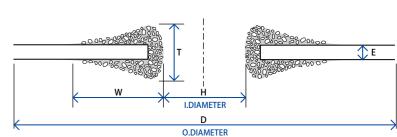

^{*}Please consult with our salesmen for details to determine wheel configuration.

ID Blades for MONO & MULTI crystalline Silicon Ingots and Bricks

Croppin

Used for cropping MONO and MULTI silicon ID blades are high-tensile strength thin blades with electroplated diamond edge. Advantages of ID blade slicing are cuts with high accuracy, superior flatness and minimal kerf loss.

Size Table

| Size | Outer Diameter | Inner Diameter | Core Thickness | Blade Width | Blade Thickness | Grit size | Size of ingot |
|--------|----------------|----------------|----------------|-------------|-----------------|---------------|---------------|
| | D:mm | H:mm | E:mm | W:mm | T:mm | # | mm |
| AGI-27 | 690 (27 1/2") | 240 (9 1/2") | 0.15, 0.18 | 3.0 | 0.4~0.5 | 170, 200, 230 | 125□ |
| AGI-34 | 860 (34") | 305 (12") | 0.13, 0.16 | 3.0 | 0.4 0.3 | 170, 200, 230 | 156□ |

^{*}Please consult with our salesmen for details to determine band configuration.

Case Study

| Cronning | Blade size | Cutting Speed | Surface Speed | Coolant |
|----------|------------------------------------|---------------|----------------------------|---------------|
| Cropping | AGI-27(for 125□), AGI-34(for 156□) | 20~50mm/min | 1000∼1500min ⁻¹ | Water Soluble |

[◆] Coolant supply is crucial during the cut.

Grinding Wheels for Bricks

OD Grinding / 4 Face Grinding

Used for grinding bricks to final size. Metal bond and Resin bond wheels are available to fit all machine makes.

Type of Wheels

■ Grit Size: #200 - #500

Bond Type: 1 Metal Bond Wheels

Mainly used for rough grinding. Metal matrix such as Cu, Sn, Fe and Co secures diamond particles firmly for long wheel life.

2 Resin Bond Wheels

Mainly used for finish grinding.

- ◆ Thermal cured resin matrix for good grinding ability and superior brick finish
- ◆ Polyimide bond for heavy grinding
- ◆ "BRIGHTSTAR" bond for super finish

Range of dimension : \lceil Wheel diameter $/ \phi 50 \sim \phi 400$

Wheel width / 3~10mm

Slot / applicable

*Please consult with our salesmen for details.

Case Studies

Work piece: 156 ☐ MUTI Silicon Bricks

Rough Grinding 1

| Wheel Spec | Surface Speed | Stock Removal | Table Feed | | Surface Roughness |
|-------------|---------------|---------------|------------|---------------|-------------------|
| SD200 Metal | 2,500m/min | 0.8mm | 400mm/min | $\overline{}$ | _ |

Semi-Finish Grinding 1

| Wheel Spec | Surface Speed | Stock Removal | Table Feed | Surface Roughness |
|-------------|---------------|---------------|------------|-------------------|
| SD500 Resin | 2,500m/min | 0.05mm | 400mm/min | Ra0.1μm |

Finish Grinding 2

| Wheel Spec | Surface Speed | Stock Removal | Table Feed | Surface Roughness | |
|------------------|---------------|---------------|------------|----------------------|--|
| SD500 BRIGHTSTAR | 2,500m/min | 0.05mm | 400mm/min | Ra0.03~0.1μm or less | |

^{*}Brick surface finish and grind wheel life are dependent on machine rigidity and grinding conditions.

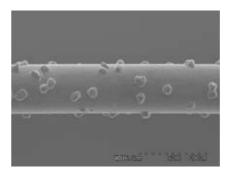

Diamond Electroplated Wire EcoMEP

Wafering / Squaring / Cropping

ECO MEP

EcoMEP Diamond Wire for cutting and wafering silicon and hard, brittle materials such as sapphire. Using electroplating to secure diamond particles to high tensile strength wire, EcoMEP fixed abrasive wire is superior to conventional slurry slicing by dramatically reducing process time, improving sub-surface damage and improving overall yield. Using water-based coolants enables possible reclaim and recycling of cutting chips, lowering cost of ownership.

Advantages

1. Lower overall cost of ownership

- ◆ Reduce process time
- ◆ More wafers per ingot ⇒ Possibility to slice thinner wafers with thinner wire

2. Improvement of Wafer Quality

- ◆ Less sub-surface damage
- ◆ Better thickness variation

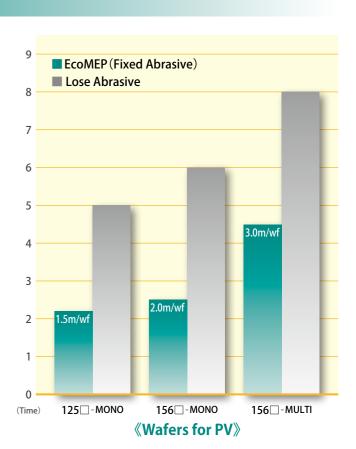

3. Reduction of Environmental Burdens

- ♦ Use of water base coolant ⇒ No use of slurry⇒ Cleaner work environment
- ◆ Possible recycle of silicon kerf

Spec & Application

| Application | Core Diameter[mm]—Grit Size[μ m](Finish Diameter mm) | Length per spool |
|-------------|---|-------------------|
| Wafering | φ0.12 10—20 (φ0.145) | 10~50km/spool |
| Squaring | φ0.25 30—40 (φ0.330) | 10. ~30kiii/spooi |

^{*}Other spec of wires is available
